

AUTOMATIC CHICKEN COOP DOOR WITH LIGHT SENSOR AND TIMER

Parts included:

- (1) Controller
- (1) Door
- (2) Rails
- (8) Mounting screws
- (1) Predator Stop Bar

1. Cut a hole in coop 8" Wide x 12.5" High. Using the Screws included, install rails along the side of your opening keeping 8" of space between them. Make sure the Holes at the Bottom of the Rails are on the Inside. Install Predator proof rail across the bottom of the two rails. Place the door in the rails with the hole at the top. Make sure the door opens and closes easily and the rails are aligned properly. Make any adjustments necessary for the door to slide easily.
2. Position and install the controller directly above the center of the door approximately 4.5" from the top of the rails to the bottom of the Controller.
3. Tie the String to the Door using a Secure knot. Manually twist the motor rolling the string up until the top of the door is 2 1/2" above the railing.
4. Install the Batteries into the controller and close the lid.
